DATE MAILED:

This is a communication from the examiner in charge of your application. COMMISSIONER OF PATENTS AND TRADEMARKS

This application has been examined	Responsive to communicat	tion filed on 5-4-04	This action is made final.
A shortened statutory period for response to Failure to respond within the period for resp	this action is set to expire	3 month(s), days fro	om the date of this letter.
Part 1 THE FOLLOWING ATTACHMENT			
Notice of References Cited by E. Notice of Art Cited by Applicant, Information on How to Effect Dra	PTO-1449.	 Notice of Draftsman's Pa Notice of Informal Paten 	tent Drawing Review, PTO-948. Application, PTO-152.
Part II SUMMARY OF ACTION 1. Claims / - / 4	17-24 940	145-49 an	_ are pending in the application.
2, Claims			
3. Claims	24 and 45	49	are rejected.
5. Claims			are objected to.
6. Claims		are subject to restrict	on or election requirement.
7. This application has been filed with	n informal drawings under 37 C.F.I	R. 1.85 which are acceptable for exar	nination purposes.
8. Formal drawings are required in re	sponse to this Office action.	. '	
The corrected or substitute drawing are acceptable; and accepta	gs have been received on ble (see explanation or Notice of I	. Under 37 Draftsman's Patent Drawing Review,	C.F.R. 1.84 these drawings PTO-948).
10. The proposed additional or substite examiner; disapproved by the	tute sheet(s) of drawings, filed on examiner (see explanation).	has (have) been	□ approved by the
		s been ☐ approved; ☐ disapprove	
12. Acknowledgement is made of the compared been filed in parent application,	claim for priority under 35 U.S.C., serial no.	119. The certified copy has ☐ been ; filed on	received not been received
13. Since this application apppears to accordance with the practice under	be in condition for allowance excert Ex parte Quayle, 1935 C.D. 11;	ept for formal matters, prosecution as 453 O.G. 213.	to the merits is closed in

Serial No. 10/632,245

Art Unit 1754

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -(e) The invention was described in (1) an application
for patent, published under Section 122(b), by another
filed in the United States before the invention by the
applicant for patent or (2) a patent granted on an
application for patent by another filed in the United
States before the invention by the applicant for
patent, except that an international application filed
under the treaty defined in section 351(a) shall have
the effects for purposes of this subsection of an
application filed in the United States only if the
international application designated the United States
and was published under Article 21(2) of such treaty in
the English language.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14, 17-24 and 45-49 are rejected under 35
U.S.C. 102(e) as anticipated by or, in the alternative, under 35
U.S.C. 103(a) as obvious over Reichman et al. (newly cited).
Reichman et al. disclose a method for producing hydrogen by

Serial No. 10/632,245
Art Unit 1754

reacting water and a water-soluble oxygenated hydrocarbon having at least 2 carbon atoms, such as ethanol, aldehydes, ketones and ethers, in the presence of a platinum catalyst. (See column 2, lines 36-57, column 3, lines 48-62, column 4, lines 33-42, and column 12, line 9 - column 13, line 14.) Regarding claims 45-49, Reichman et al. disclose reaction temperatures of 115 to 120°C in Experiment 5.

Claims 1-14, 17-24 and 45-49 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Lomax, Jr. et al. (newly cited). Lomax et al. disclose a method for producing hydrogen comprising reacting water and alcohols in the presence of a Group VIII noble metal catalyst. (See column 1, lines 12-24 and the paragraph bridging columns 15 and 16.) Lomax et al. contemplates the use of alcohols having at least 2 carbon atoms, since the reference discloses at column 1, lines 15 and 30 that the hydrocarbon fuel can be selected from "alcohols", and any alcohol other than methanol would inherently contain at least 2 carbon atoms. any event, it would be prima facie obvious to employ ethanol as the hydrocarbon fuel in the process of Lomax et al., or other fuels such as glycerol, since Lomax et al. suggest at column 1, lines 15 and 30 that any alcohol may be employed, as well as other hydrocarbon fuels. Regarding claims 2, 3 and 45-49, Lomax

Serial No. 10/632,245

Art Unit 1754

et al. disclose at column 15, lines 66 and 67 that the exit temperature from the reactor is preferably between 500°C and 900°C, implying that the reaction temperature would be less than 500°C.

Claims 1-14, 17-24 and 45-49 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Lomax, Jr. et al. in view of Reichman et al. Lomax et al. is relied upon as discussed hereinbefore. The difference between the process disclosed by Lomax et al., and that recited in applicant's claims, is that Lomax et al. do not specifically disclose that the hydrocarbon fuel should be a water-soluble oxygenated hydrocarbon having at least 2 carbon atoms. Reichman et al. disclose representative hydrogen producing steam reformation reactions for a general alcohol at column 2, lines 36-57.) It is clear from such passage in Reichman et al. that oxygenated hydrocarbons having at least 2 carbon atoms could be reacted with water to produce hydrogen. would be prima facie obvious from such passage in Reichman et al. to employ a water-soluble oxygenated hydrocarbon having at least 2 carbon atoms as the hydrocarbon fuel in the process of Lomax et al., since the process of Lomax et al. is directed broadly to the use of any hydrocarbon fuel, and Reichman et al. establish the equivalence between methanol and higher alcohols, and even other oxygenated hydrocarbons such as aldehydes, ketones and ethers, as Serial No. 10/632,245
Art Unit 1754

a fuel source for reacting with water to produce hydrogen.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wayne A. Langel whose telephone number is (571) 272-1353. The examiner can normally be reached on Monday through Friday from 8 A.M. to 3:30 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman, can be reached on (571) 272-1358. The fax phone number for this Group is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either private PAIR or public PAIR. Status information for unpublished applications is available through private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
